Our 'Sustainable construction plan' for 2020

Drives our innovations to make a difference

Fully integrated approach to business, innovation and sustainability

Flagship Project Heijmans (1/2)

Description

- Heijmans takes up a pioneering role in the new True Price Procurement Program
- Aim: facilitate a stakeholder consultation regarding the integration of social and environmental costs in (public) procurement.
- The aim of this consultation is to define:
 - a.) the process towards integrating monetized social and environmental impacts in (public) procurement, and
 - b.) how the content of monetizing social and environmental impacts for procurement decisions can best be integrated.

Impacts

- All external costs of environmental and/or social impacts that are linked to the project that is procured and are deemed material to various stakeholders in the procurement process
- All indirect economical, societal or natural added value of the products and services that are procured and deemed material.

Flagship Project Heijmans (2/2)

Opportunity

- Integrate societal externalities in the mainstream public procurement decision making
- Create insight in material externalities of business activities and projects
- Monetize the (indirect) added value of projects, products and/or services
- Build on the existing system and knowledge infrastructure of MKBA (social cost-benefit analysis)
- Renewed European Guideline on Public Procurement also calls on policy makers to integrate objective criteria on social and environmental externalities in procurement decisions by April 2016

Challenge

- Consensus on an objective method for monetizing externalities:
 - Approach: open dialogue with relevant parties with experience and expertise will facilitate that process
- Degree to which already executed projects can be used and shared to further define the method
 - Approach: anonymizing the results and sharing relevant knowledge
